## 2. Citations and explanations (Rule 70.7)

The invention relates to a multiple mounting head for mounting components on substrates.

Multiple mounting heads for pick and place methods are known from DE 19654172, for example. The invention therefore relates to a multiple mounting head for mounting components on substrates, said head having a carrier which is arranged so as to be rotatable about a rotational axis, and having a plurality of pick-up tools which are movable in a placement direction at an angle to the rotational axis, which tools are arranged on the carrier and from which the components can be picked.

The invention attempts to improve mounting accuracy and speed. It is proposed that each pick-up tool carry out mounting independently of external actuators, so that there is no further need for any such external actuators to be connected and disconnected. Consequently, each pick-up tool (210) is provided with one or more active drives and/or sensors.

Pick-up tools equipped in this manner are not known from the cited prior art. There is no incentive to do this.

Box No. V

citations and explanations supporting such statement

The subject matter of claim 1 can therefore be considered novel and inventive.

Claim 1 satisfies the requirements of PCT Article 33(2) to (4).

Dependent claims 2-18 concern further embodiments of the subject matter of claim 1 and therefore also satisfy the requirements of PCT Article 33(2) to (4)).
